QA Head

Chennai

Job Description

Good Leather Group is looking for a QA Head who will be leading the QA processes in the factory with the QA team. More information on the roles and responsibilities are articulated below.

About the Company

Good Leather Group is a leading leather manufacturer and exporter established in 1988, located in significant locations of Southern India. It is recognized as one of the leading manufacturers of few leading brands in the globe over the decades establishing quality, trust, and durability in the products that roll out from every facility of the group.

The fully integrated manufacturing facilities of the group are fully equipped with the best of the infrastructure, machinery, process and people that have the capacity to roll out best of the world class products under one roof. The vision and philosophy of the company is built in strong commitment, dedication and integrity in everything that is done in the group.

With a strong growth record over the years and a positive customer retention and satisfaction track, the group is poised for a significant growth trajectory and transformation to new age leather industry practices and processes to sustain global challenge and competition.

As part of the Transformation Journey, the group is implementing cutting edge systems and processes and making necessary investments to build world class talent and infrastructure to build a compelling and sustainable future for the group and the industry.

In order to support the 2x growth the group is looking to build the right leadership talent at all levels to augment the right talent to execute the growth plan and to realize the aspiration of

becoming one of the best Leather Groups in the country in terms of trust, quality and customer satisfaction.

Roles & Responsibilities

- Lead the factory QA processes with the QA Team to produce and deliver the Final Finished Product with Customer Acceptable Quality Standards.
- Ensure the SOPs are well-defined, implemented, sustained and monitored in all sections & production stages starting from Incoming Materials, Lab Testing, T4 Process, In-process (cutting, closing, lasting, finishing), Packaging-Labeling through Container Loading of Final Finished Product.
- Manage both in-house & out-sourced component & upper units and ensure QA systems are implemented and expected quality levels are achieved.
- Troubleshoot the day-to-day production quality issues related to specifications, dimensions, materials, processes, statistical process controls, last/mould quality checks, etc.
- Able to plan, organize and lead technical meetings with respective stakeholders as & when required.
- Continuously work to improve the processes and team competencies to upgrade the overall quality of the product and to achieve the Quality KPIs: both Customer & Factory.
- Coach-Mentor the team on the Customer Quality Standards and ensure strict adherence.
